CryptoCompare

ASSET REPORT

October 2021

About CryptoCompare

CryptoCompare is a global leader in digital asset data providing institutional and retail investors with high-quality real-time and historical data. Leveraging its track record of success in data expertise, CryptoCompare's thought-leadership reports and analytics offer objective insights into the digital asset industry.

About This Report

Cryptocurrencies were born in 2009 when Bitcoin was released as the first global decentralised currency. In the last 12 years, crypto has grown into an investable asset class of its own, with exchanges providing a platform to buy and sell thousands of different currencies. However, for most of its history, the asset class has mainly been fuelled by a purely retail investor base who have arguably left institutional investors and investment management professionals behind when it comes to grasping the opportunities in the cryptocurrency space. This began to change in 2020 when well-regarded investors and corporations started to pay more attention to this growing asset class.

A major challenge for institutional investors and other professionals looking into the sector is the lack of reliable data. This complicates the analysis of investment opportunities in cryptocurrencies, specifically when considering crypto as part of a wider investment portfolio. The Asset Report was initiated to tackle this challenge.

CryptoCompare's Asset Report aims to provide professionals in the financial services space, particularly the investment management industry, with a summarised analysis of the latest movements in cryptocurrency markets. The report frames cryptocurrencies as an investable asset that has a role to play in global investment portfolios. Thus, it compares major cryptocurrencies with traditional asset classes, as well as with each other. Finally, the report includes factsheets that dive into the latest developments of the five largest assets, including market updates, DeFi, scaling solutions, ownership concentration, and developer news.

This review is conducted on a monthly basis and caters to institutional investors, analysts and regulators interested in more specific analyses on the performance and risk metrics of the largest available cryptocurrencies.

For questions related to this research or any potential requests, feel free to contact CryptoCompare's research department at **research@cryptocompare.com.**

Metric Methodology 21

Featured Currencies

1. BTC

Bitcoin is the world's first decentralised cryptocurrency, having been released in 2009 by the pseudonymous developer(s) Satoshi Nakamoto. It utilises Proof of Work (PoW) mining to validate transactions between decentralised parties and to ensure the security of the blockchain network. It is the largest cryptocurrency by market capitalization, having reached a $1T valuation for the first time in February 2021.

2. ETH

Ether is the native currency of Ethereum, an open-source blockchain created by Vitalik Buterin in 2014. It has a large range of decentralised applications facilitated via smart contracts, including peer-to-peer lending, insurance, and yield farming. While it currently uses PoW as a consensus protocol, it is transitioning to the alternative Proof of Stake (PoS) via Ethereum 2.0 upgrades.

3. XRP

XRP is a cryptocurrency built by Ripple Labs in 2012. It specialises as a payment system that supports real-time transfers of money across geographies, currencies, and assets. It aims to revolutionise the international banking and payment industry by acting as the common currency for international transfers.

4. SOL

SOL is the native token of the Solana blockchain, which was released in April 2019. It is a smart contract platform that has seen incredible growth thus far in 2021. It uses a combination of PoS and Proof of History to validate transactions and has grown to become Ethereum's biggest competitor in the Decentralised Finance space.

5. ADA

ADA is the cryptocurrency of the Cardano blockchain network, which was launched in 2017 by Charles Hoskinson, a co-founder of Ethereum. It is one of the largest PoS blockchains, which validates transactions by selecting validators on the blockchain proportionally to the amount of ADA they own and stake. It is an academically rigorous project, which launched smart contract functionalities in September 2021.

Key Market Insights

Solana Boasts Highest October Returns – Total Value Locked Reaches $12.5bn

Solana (+43.4%) had a stellar October as the cryptocurrency outperformed other large-cap assets in terms of intramonth returns. The smart contract alternative to Ethereum reached $12.5bn in TVL (+35% since September), with the majority locked in DEXs. Despite the platform's growth, TVL is still low relative to funds locked into DeFi on Ethereum, which stood at $164bn at the end of October (+32% since September).

US Futures ETFs Trigger Strong October Performance for Bitcoin

Market speculation surrounding the potential acceptance of a US-listed Bitcoin ETF in September, followed by its official acceptance in October spurred, a healthy bull run throughout October with the cryptocurrency ending the month at $61,350 (+40%). While most other direct USD/USDT spot market volumes dropped throughout the month, trading volumes for BTC markets increased and topped $235bn (+16%) on BTC/USDT markets and $61.8bn (+36%) across BTC/USD markets.

Investment inflows also surged for single tracker Bitcoin-based digital asset investment products, with inflows in October reaching almost $800mn (excluding the $1bn+ for ProShares' newly listed BTC futures ETF). In comparison, the asset experiencing the second highest inflows was Solana ($36.4mn). Current AUM for BTC-based investment products (spot markets only) now stands at over $50bn – 4.3% of the total BTC market capitalization.

On-Chain Transactions Trending Upwards - Ripple Sees End of Month Spike

Total on-chain transactions trended upwards in October, from between 9-11% for Ethereum and Bitcoin (totals of 8.45mn and 37.6mn respectively). Ledger transactions on Ripple rose 21.2% to a total of 43.3mn. This coincides with the release of Ripple's Q3 2021 Sales Report, which shows a 200%+ increase in XRP's ODL (On-Demand Liquidity) sales compared to Q2.

ETH Experiences Deflationary Rate and Spark Pool Shuts Down

From the 27th to the 30th of October, Ethereum experienced a deflationary rate as 62k ETH were burnt in that period due to high transaction volumes (up 9.6% to 37.6mn in October) and growing average transaction fees (up 15.4% to $36.04 in October). Amid the transition to proof-of-stake validation, Ethereum mining pool SparkPool has shut down, with the majority of its block share going to F2Pool.

Asset Performance & Market Metrics

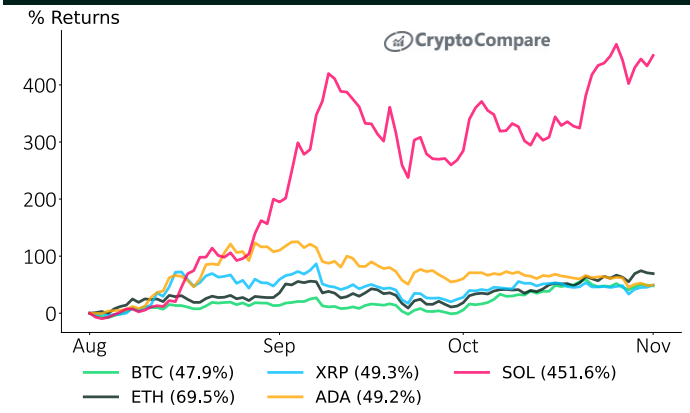

Summary

SOL was the best performing asset out of the largest cryptocurrencies in October, returning 43.4% throughout the month. It was closely followed by ETH and BTC with 43.0% and 40.0% returns respectively. ADA was the only major cryptocurrency to see a negative performance in October, returning -7.09%.

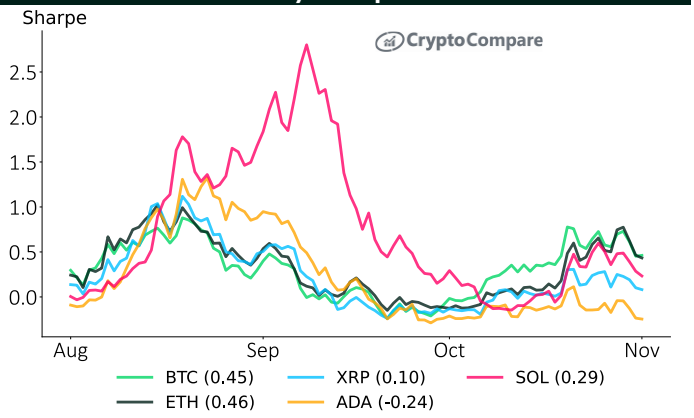

The top cryptocurrencies by market capitalization have seen strong returns so far this year, with all cryptos returning over 100%. This is well above competing, traditional assets such as Gold, which has seen negative returns of 6.3% so far this year. Similarly, the stock indices S&P500 and NASDAQ 100 have returned just 22.3% and 19.6% in 2021. However, with higher returns comes significantly higher volatility – in October, the investigated crypto assets had volatilities between 54.4% and 88.7%, compared to just 10.9% – 13.9% for the aforementioned traditional assets.

September	BTC	ETH	XRP	ADA	SOL	GOLD	S&P500	NASDAQ
EoM Price	$61,350	$4,290	$1.11	$1.97	$203	$1,781	4,605	14,690
Market Cap	$1.16tn	$507bn	$106bn	$65.0bn	$102bn	$11.4tn	$36.5tn	$32.8tn
Month Return	40.0%	43.0%	16.8%	-7.09%	43.4%	1.4%	6.7%	-5.6%
3 Month Return	47.9%	69.5%	49.3%	49.2%	451.6%	-2.0%	4.5%	5.0%
YTD Return	111.8%	482.0%	407.1%	982.0%	13322%	-6.3%	22.3%	19.6%
EoM Sharpe	0.45	0.46	0.10	-0.24	0.29	-0.15	0.27	0..18
Month Volatility	60.5%	63.8%	66.0%	54.4%	88.7%	11.4%	10.9%	13.9%
Max Drawdown	-35.3%	-33.4%	-23.1%	-37.0%	-37.1%	-6.0%	-6.7%	-8.5%

3 Month Returns

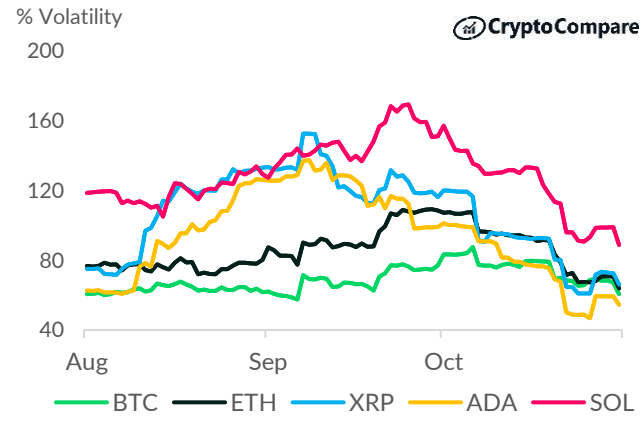

Monthly Sharpe Ratio

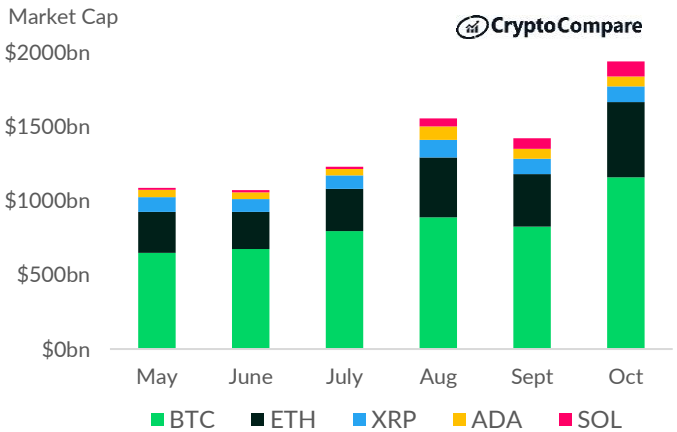

SOL boasted the highest returns out of the top cryptocurrencies, recording a three-month gain of 452% (Sharpe 0.29), followed by ETH with 69.5% returns (Sharpe 0.46) and ADA with 49.2% returns (Sharpe -0.24). XRP and BTC trailed with returns of 49.3% and 47.9% respectively, albeit BTC's 30-day Sharpe (0.45) remained high due to its lower volatility.

Volatility

Market Capitalisation Dominance

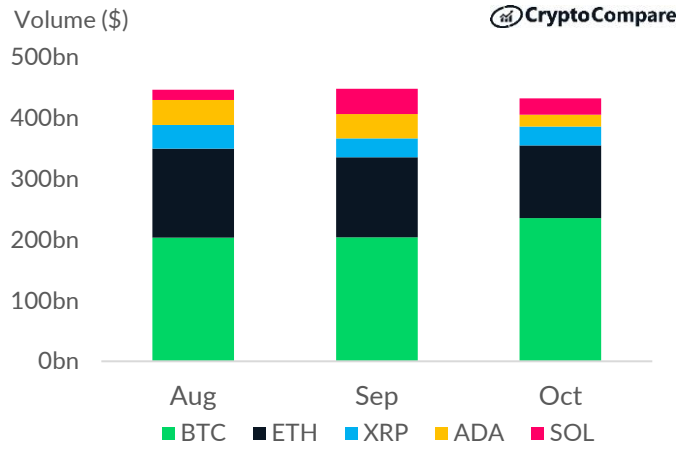

Volatility across the top 5 assets saw a significant decline over the month of October. ADA became the least volatile asset at 54.4% volatility, falling below BTC's volatility of 60.5%. SOL was the most volatile asset at 88.7%, which remains notably below its September volatility of 151%. Total market cap for the top 5 cryptos rose 36.3% in October to $1.9tn, as ETH recorded a 26.2% market share of the top five assets, the highest ever recorded.

Volumes

Direct USDT Volume

Direct USD Volume

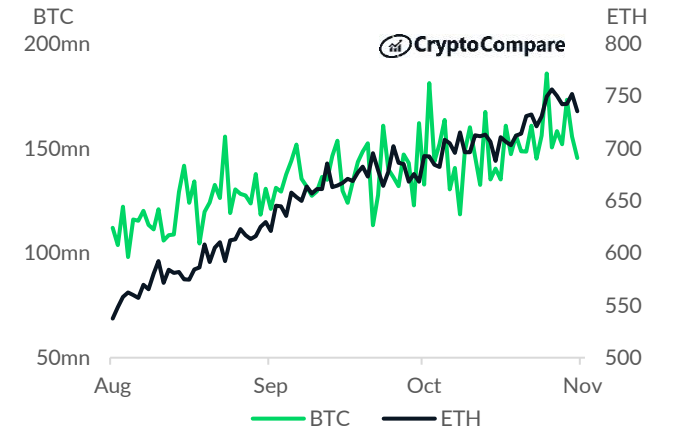

Volume ($)	USDT			USD		
	Aug	Sep	Oct	Aug	Sep	Oct
BTC	203bn	204bn (+0%)	235bn (16%)	45.5bn	45.6bn (+0.2%)	61.8bn (+36%)
ETH	146bn	132bn (-10%)	119bn (-10%)	38.7bn	44.5bn (+15%)	38.9bn (-12%)
XRP	38.6bn	31.1bn (-19%)	31.0bn (-0%)	4.15bn	3.06bn (-26%)	3.98bn (+30%)
ADA	41.1bn	39.8bn (-3%)	19.9bn (-50%)	7.11bn	5.13bn (-28%)	2.11bn (-59%)
SOL	16.9bn	41.8bn (+148%)	26.8bn (-36%)	7.05bn	27.4bn (+289%)	18.3bn (-33%)
Total Top 5	446bn	448bn (+0%)	432bn (-4%)	102bn	126bn (+23%)	125bn (-0%)

In October, ADA volumes fell 58.9% and 50.2% for USD and USDT markets respectively, falling below XRP volumes. BTC volumes saw the largest increase to $61.8tn and $235tn for USD and USDT markets (35.7% and 15.6% increase). Thus, BTC saw its volumes market share rise significantly to 49.4% in USD markets (vs. 36.3% in September) and 54.4% in USDT markets (vs. 45.4% in September).

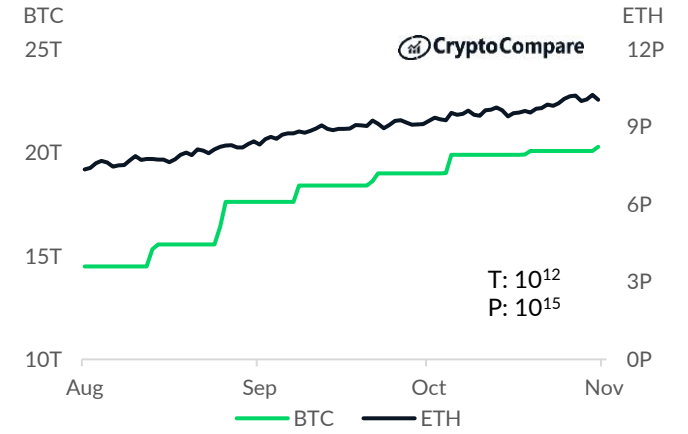

Asset Metric Decomposition

Proof of Work Metrics:

Hashrate (TH/s)

Difficulty

Bitcoin and Ethereum's hashrate has trended upwards in the last three months, closing October with a hashrate of 146mn TH/s and 735 TH/s respectively, compared to 112mn and 537 three months prior. Difficulty also trended upward in October, closing the month at 20.3T and 10.1P respectively.

	BTC			ETH		
	Aug	Sep	Oct	Aug	Sep	Oct
Hashrate (TH/s)	131mn	162mn (+24%)	145mn (-10%)	625	668 (+7%)	735 (+6%)
Difficulty	17.6T	19.0T (+8%)	20.3T (+7%)	8.30P	9.10P (+10%)	10.0P (+9%)
Av. Block Time (s)	579	504 (-13%)	571 (+13%)	13.3	13.6 (+2%)	13.5 (-1%)
Av. Block Size (mb)	1.02	1.11 (+9%)	1.17 (+4%)	86,918	82,912 (-5%)	75,218 (-9%)

CryptoCompare's API: https://min-api.cryptocompare.com

Proof of Stake Metrics:

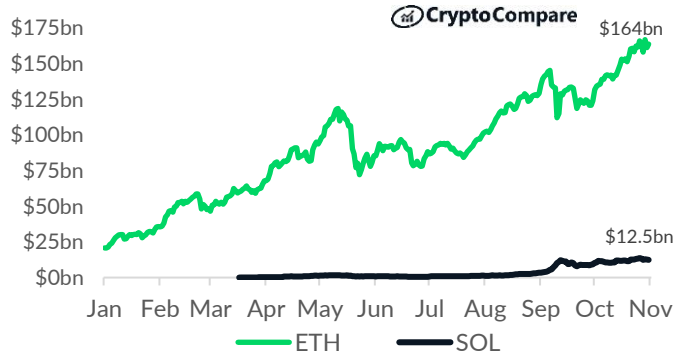

Staking	ETH			SOL			ADA		
	Aug	Sep	Oct	Aug	Sep	Oct	Aug	Sep	Oct
Staking Rate	5.8%	5.5%	5.3%	6.5%	6.6%	6.8%	6.2%	6.1%	5.8%
% of Supply Staked	6.1%	6.6%	6.7%	75.5%	76.9%	77.9%	69.9%	70.3%	70.9%

ETH, SOL, and ADA are the three largest PoS cryptocurrencies by market capitalization. Staking is a major activity for SOL and ADA holders, with 77.9% and 70.9% of the total supply was being staked at the end of October respectively, compared to just 6.74% for ETH. SOL provided the best annual interest rate for staking in October (6.8%) followed by ADA (5.8%) and ETH (5.3%).

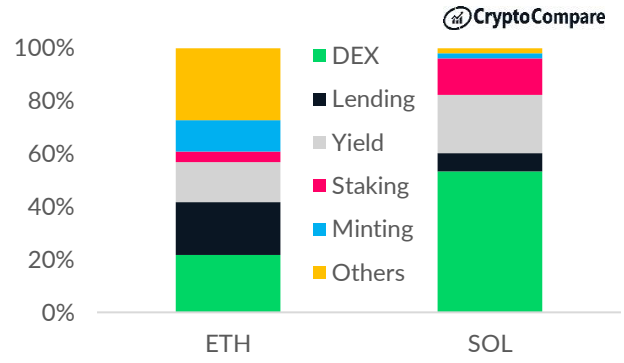

DeFi and On-Chain Activity

DeFi Activity:

Total Value Locked (TVL) in DeFi

TVL by Activity

TVL by Activity ($)	ETH			SOL		
	Aug	Sep	Oct	Aug	Sep	Oct
DEX	$33.0bn	$25.9bn	$35.5bn	$2.6bn	$5.6bn	$6.6bn
Lending	$27.2bn	$28.4bn	$32.7bn	$63.8mn	$398mn	$862mn
Yield	$17.2bn	$25.9bn	$24.9bn	$520mn	$2.5bn	$2.7bn
Staking	$4.2bn	$0.8bn	$6.5bn	$75.8mn	$523mn	$1.7bn
Minting	$12.9bn	$9.2bn	$19.5bn	$61.5mn	-	$244mn
Others	$30.0bn	$34.3bn	$44.5bn	-	$231mn	$228mn

Top Protocols by TVL			
ETH	Curve ($19.4bn – DEX)	MakerDAO ($17.5bn – Minting)	AAVE ($13.6bn – Lending)
SOL	Raydium ($1.86bn – DEX)	Saber ($1.61bn – DEX)	Serum ($1.59bn – DEX)

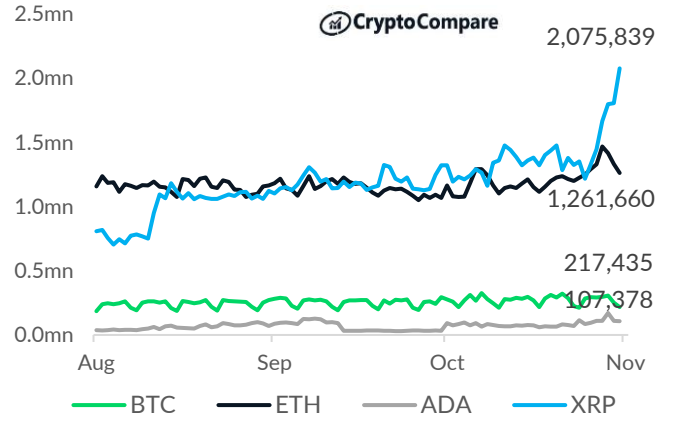

In October, TVL in DeFi rose to $164bn and $12.5bn for ETH and SOL respectively (32.1% and 35.0% increase from September). 53.3% of the value locked in October is in Decentralised Exchanges such as Raydium and Saber. On the other hand, this only accounts for 21.7% of activity in Ethereum, while Lending (20.0%), Yield Farming (15.2%) and Minting (11.9%) also took a significant share of TVL.

On-Chain Activity:

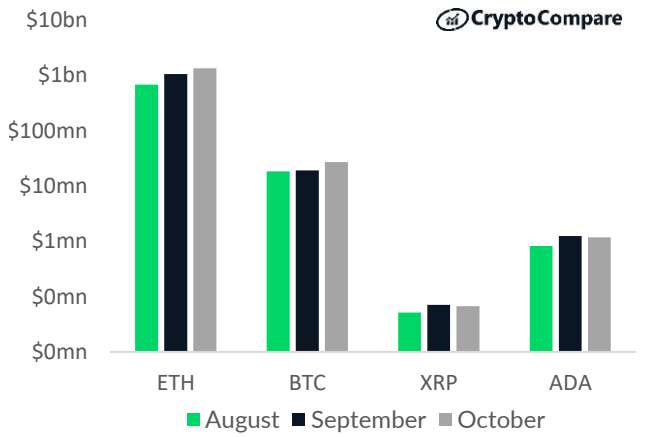

Annualised Inflation Rates	Aug	Sep	Oct
BTC	1.89%	1.75%	1.88%
ETH	4.34%	4.21%	4.30%
XRP	20.75%	20.20%	21.59%
SOL	5.90%	5.51%	5.80%
ADA	2.10%	2.06%	2.05%

Annualised inflation rates remained stable in October. XRP issuance remains significantly above its peers at 21.59%. This is followed by SOL (5.80%), ETH (4.30%), ADA (2.05%) and BTC (1.88%).

Daily Transaction Count

Total Monthly Fees (USD)

Txns	Aug	Sep	Oct
BTC	7.45mn	7.61mn	8.45mn
ETH	35.9mn	34.3mn	37.6mn
ADA	1.90mn	1.38mn	2.63mn
XRP	30.3mn	35.7mn	43.3mn

	Aug	Sep	Oct
BTC	$18.6mn	$19.3mn	$27.3mn
ETH	$685mn	$1.10bn	$1.35bn
ADA	$822,375	$1.26mn	$1.19mn
XRP	$51,310	$71,060	$67,740

XRP transactions rose 21.2% in October to a total of 43.3mn, diverging from ETH transactions which saw a smaller increase of 9.66% to 37.6mn. This is well above BTC and ADA transactions, which totalled 8.45mn and 2.63mn in October (+11.0% and +43.2% change).

Total fees incurred for all transactions in the Bitcoin network grew 41.7% to $27.3mn, while fees in the Ethereum network also rose 26.5% to $1.35bn, the largest monthly amount ever recorded. This comes to an average transaction fee of $36.04, which suggests the issues with Ethereum's gas fees remains a major headwind for the cryptocurrency.

Investable Digital Asset Products and Treasuries

Investment Products and Flows:

Asset	No. of ETPs	Total Monthly Flows	Total AUM*	% of Total Asset Market Cap

Bitcoin (BTC)

Summary

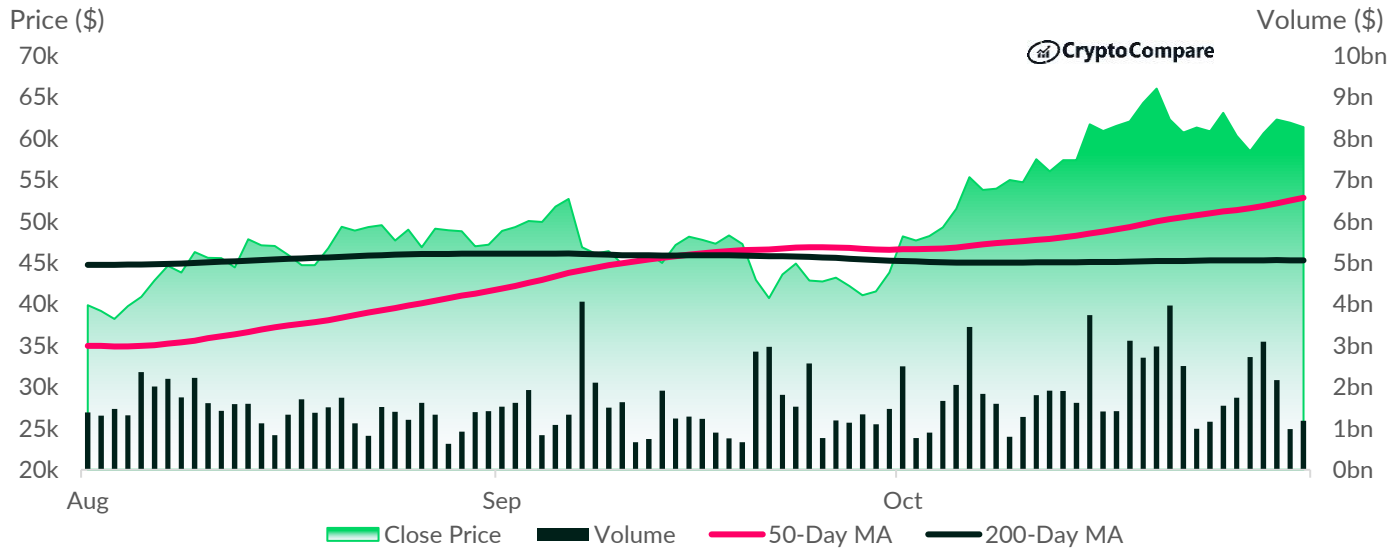

Bitcoin's price rose 40.0% in October to $61,350, reaching a market capitalization of $1.2tn at the end of the month. This included an intra-month high of $66,980, an all-time high for the cryptocurrency. Monthly volumes (BTC/USD markets) grew 35.8% to $61.8bn, while 30-day volatility fell from 77.1% to 60.5%. Bitcoin's Lightning Network, the primary scaling solution for the blockchain, saw significant growth as capacity grew 19.1% from an average of 2,591 BTC in September to 3,058 BTC in October. Total fees paid for transactions rose by 41.7% to $27.3mn, the highest percentage increase since April 2021.

Market Activity:

Key News/Events
Oct 19th – First Bitcoin Futures ETF rises more than 4% in trading debut on the NYSE
Oct 14th – Canadian city plans to supply residents' heat using Bitcoin Mining
Oct 1st – BiFi brings native BTC lending to Ethereum

Market Metrics	Aug	Sep	Oct
Market Cap	$887bn	$825bn	$1.16tn
EoM Price	$47,159	$43,829	$61,350
Average Daily Returns	+0.47%	-0.17%	+1.15%
Monthly Returns	+13.7%	-7.1%	+40.0%
USD Monthly Volumes	$45.5bn	$45.5bn	$61.8bn
Total Supply (BTC)	18.8mn	18.8mn	18.9mn
Annual Inflation	1.89%	1.75%	1.88%
NVT Ratio	4.87	4.30	7.10
EoM Sharpe Ratio	0.52	0.03	0.45

Risk Metrics	Aug	Sep	Oct
Avg Daily Volatility	3.27%	4.03%	3.48%
Monthly Volatility	61.5%	83.2%	60.2%
Monthly Max Drawdown	-26.1%	-24.9%	-35.3%

Bitcoin's price closed at $61,350 in October, ending the month up 40.0%. On the 1st of October, Bitcoin's price broke above the 200-day moving average, which typically acts as a key resistance (or support) level, explaining the move upwards from a technical analysis perspective. The 50-day and 200-day moving average closed the month at $52,837 and $45,289 respectively, while total volumes averaged $1.98bn throughout the month.

Lightning Network and Scaling Solutions:

Scaling Summary

*Certain values within the above chart have been interpolated

Activity within the Bitcoin Lightning Network has consistently grown so far in 2021. In October, the average daily capacity of the network grew 19.1% to 3,085 BTC, an all-time high for the second-layer solution.

Similarly, the number of transaction channels in the network grew 7.6% to 77,569 channels, where users can transact with each other from.

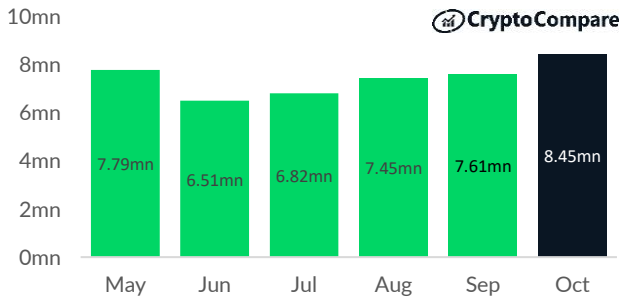

In October, the number of nodes interacting with the Bitcoin blockchain and the Lightning Network grew 7.7% to 16,908.

Lightning Network	Aug	Sep	Oct
No. of Open Channels	65.8k	72.1k	77.6k
No. of Nodes	14.4k	15.7k	16.9k
Capacity (BTC)	2,277	2,591	3,085

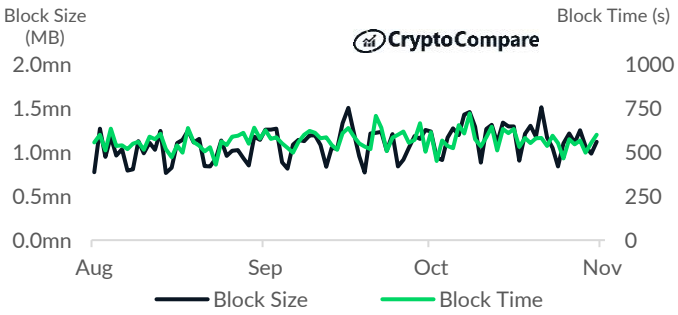

Network Metrics:

Network Metrics	Aug	Sep	Oct
Monthly Transactions	7.5mn	7.6mn	8.5mn
Blocksize (MB)	1.02mn	1.11mn	1.17mn
Blocktime (s)	554	579	571

Average Fee	$2.49	$2.50	$3.20

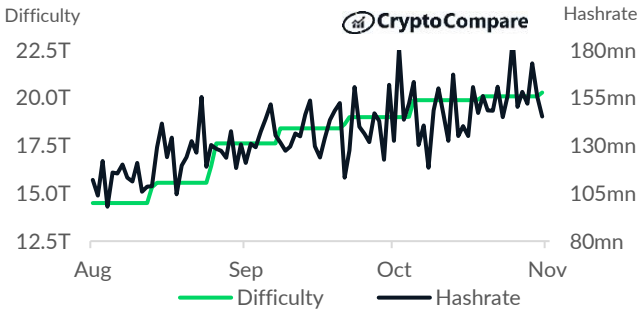

BTC Monthly Transactions

BTC Block Size and Time

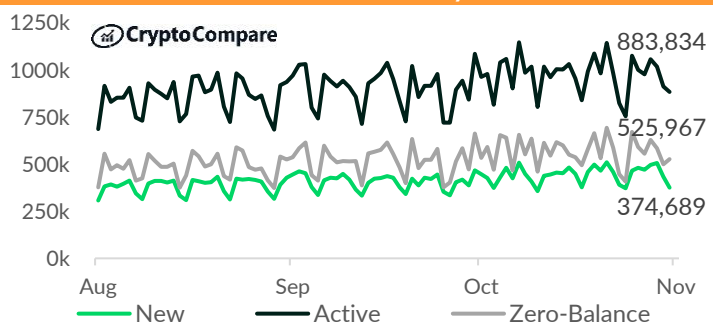

BTC Hashrate and Difficulty

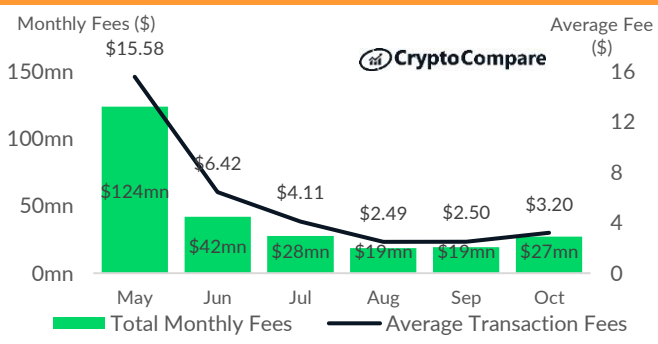

Bitcoin's average hashrate in October grew 9.6% to 150.7mn EH/s, the highest end-of-month level since the lows reached at the end of June following China's crackdown on mining. Average BTC block size increased 5.8% to 1.2mn megabytes, while average block time decreased 1.3% to 571 seconds.

BTC Address Activity

BTC Fees

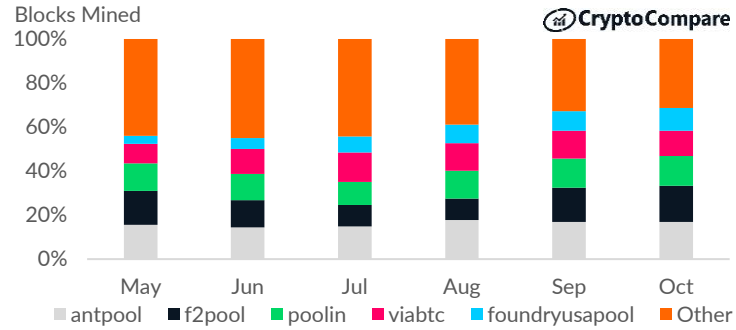

Average daily active addresses in the Bitcoin network grew 7.8 % to 974,879 in October, the highest level since May 2021. Similarly, new addresses in the network increased 9.2% to 444,651. The total amount of fees paid in October grew 41.7% to $27.3mn, however this remains well below the all-time high fees paid in April ($246mn).

CryptoCompare's API: https://min-api.cryptocompare.com

Mining Pools:

Mining Pool Hashrate Distribution

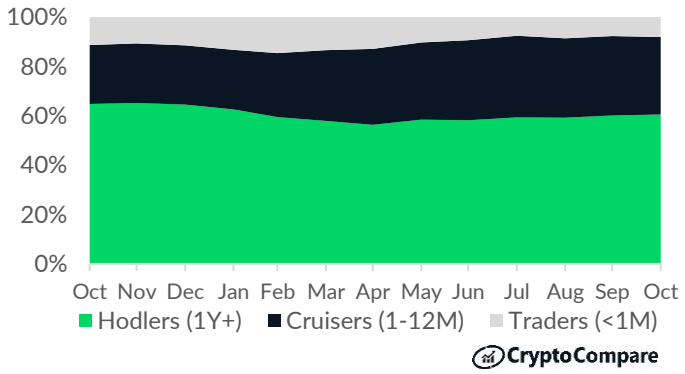

In October, Antpool remained the largest Bitcoin mining pool with 793 blocks mined (16.9% of total). F2Pool was the second largest miner after overtaking its competitors in September, mining 771 blocks (16.5%). This was followed by Poolin (631 blocks, 13.5% of total), ViaBTC (537 blocks, 11.5% of total) and Foundry USA Pool (484 blocks, 10.3% of total).

The dominance of the top five mining pools increased from 67.1% in September to 68.7% in October.

Ownership Distribution:

Address Type	Aug	Sep	Oct
Hodlers	22.5mn	22.8mn (+1.3%)	23.1mn (+1.0%)
Cruisers	12.2mn	12.2mn (+0.1%)	11.9mn (-2.4%)
Traders	3.27mn	2.94mn (-10.2%)	3.11mn (+5.8%)

The number of investors holding Bitcoin for over a year grew 1.0% in October to 23.1mn (60.5% of total holders), an all-time high for the network. However, the number of traders also grew 5.8% to 3.1mn, or 8.2% of all investors.

Developer News Statistics:

News Summary
LQwD FinTech Corp. announced on the 1st of November that it had acquired $4.5mn of Bitcoin, meaning the company holds approximately 133 Bitcoins. The purchase is not purely for monetary gain, but also serves as an operational asset given the company's involvement with the development of the Lightning Network.

Ethereum (ETH)

Summary

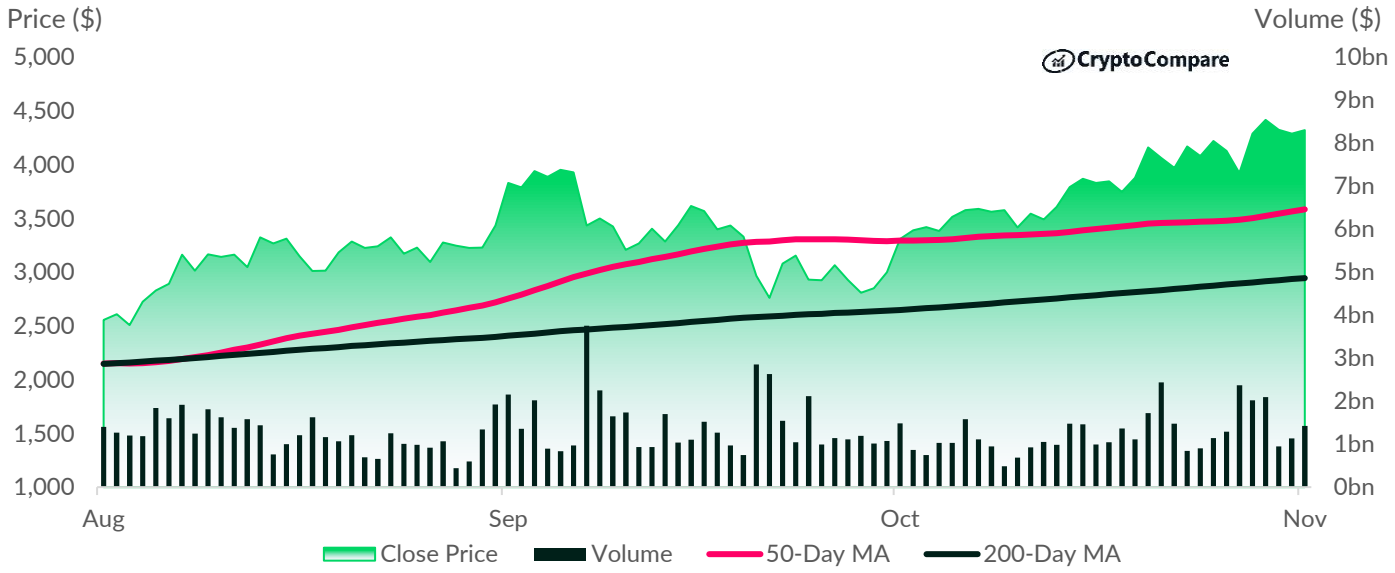

ETH's price rose 43.0% in October to $4,290, reaching a market capitalization of $507tn at the end of the month. This included an intra-month high of $4,460, an all-time high for the cryptocurrency. Monthly volumes (ETH/USD markets) fell 12.5% to $38.9bn, while 30-day volatility also fell from 102% to 63.8%. Total Value Locked in DeFi rose 32.1% to $164bn, also an all-time high. Fees continue to be a significant headwind for the cryptocurrency, as total fees paid in October grew 26.5% to $1.4bn, which caused significant burning of ETH, and thus a deflationary issuance rate between the 27th and 30th of October.

Market Activity:

Key News/Events
Oct 21st – Automated Market Maker Mono X launches on Ethereum and Polygon
Oct 8th – Amount of ETH held by miners reaches highest level since 2016
Oct 1st – Société Générale applies for $20mn loan with Ethereum layer 2 protocol MakerDAO

DeFi Protocols:

DeFi Summary

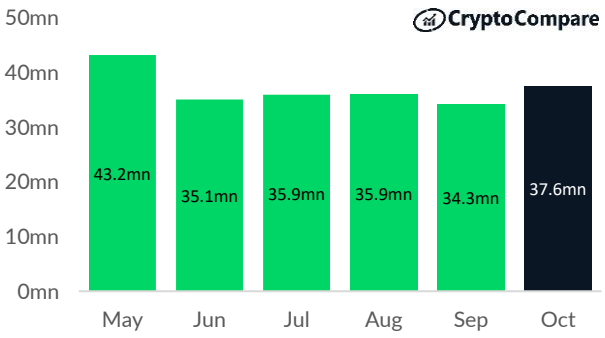

Total Value Locked (TVL) in the Ethereum Network grew 32.1% in October to $164bn. Curve, an exchange liquidity pool designed for stablecoin trading, was the protocol with the largest TVL, rising 41.0% to $19.3bn. This was followed by MakerDAO, the protocol of stablecoin DAI, with $17.6bn (48.8% growth since September) and the lending protocol AAVE, with $17.6bn TVL (8.0% growth since September).

Statistics	Aug	Sep	Oct
Staking Rate	5.81%	5.48%	5.25%
% of Supply Staked	6.10%	6.58%	6.74%
Total Value Locked	$129bn	$124bn	$164bn

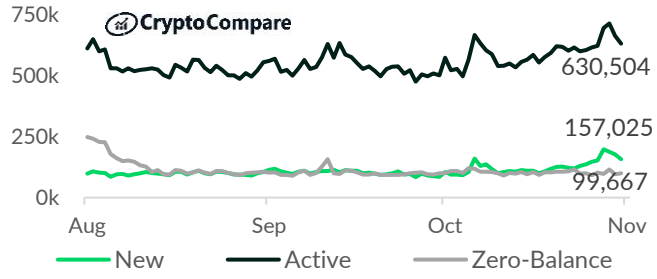

Network Metrics:

Network Metric	Aug	Sep	Oct

ETH Monthly Transactions

ETH No. of Addresses

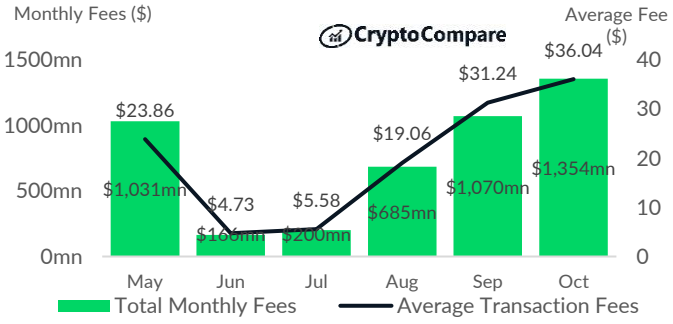

Block Rewards vs. Burnt ETH

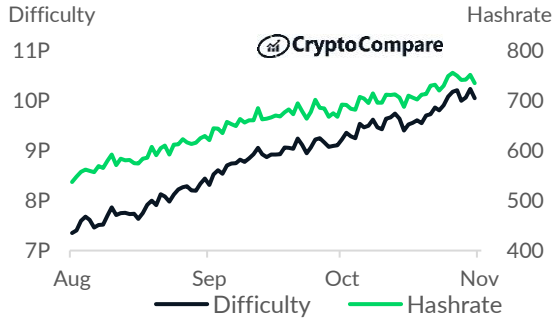

Average daily active addresses on the Ethereum network grew 10.1% in October to 592k, while new addresses also grew 23.2% to 125k. From the 27th to the 30th of October, Ethereum was deflationary as 62k ETH were burnt in that period due to high transaction and fee volumes. A total of 303k ETH were burnt throughout the month, compared to 415k ETH of miner rewards.

ETH Fees

ETH Difficulty and Hashrate

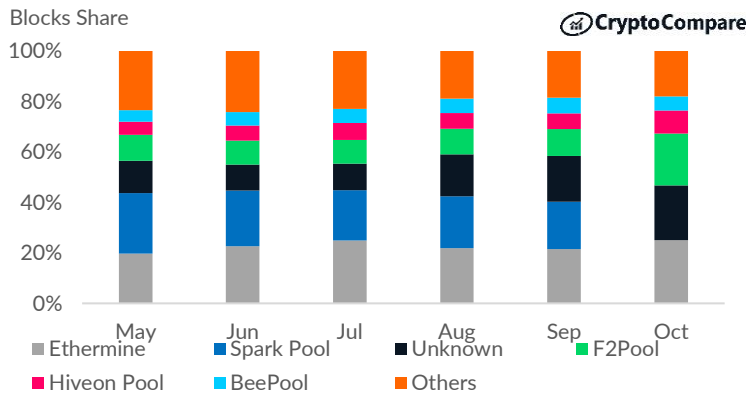

Fees spent on the Ethereum network continued to rise in October and reached another monthly all-time high of $1.4bn, a 26.5% growth from September. Average fee per transaction rose to an all-time high of $36.04. Ethereum's hashrate and mining difficulty trended upwards in October, closing the month at 735 TH/s and 10.1P respectively (10.1% and 10.4% increase from September).

CryptoCompare's API: https://min-api.cryptocompare.com

Mining Pools:

Mining Pool Hashrate Distribution

In late September, the ETH mining pool 'Sparkpool' shut down, giving the rest of the top miners higher market share.

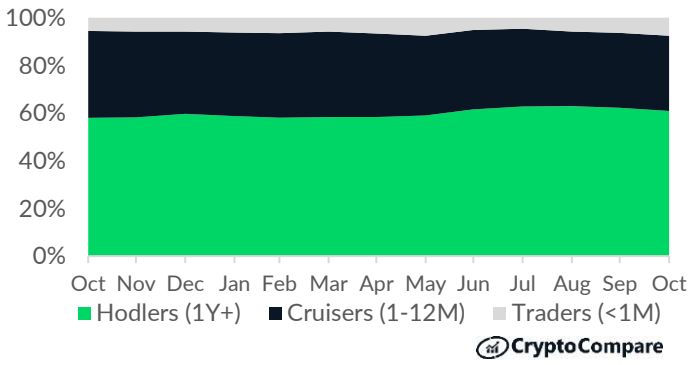

Ethermine remained the largest ETH mining pool with 25.0% share, an increase from 21.5% in September. This was followed by unknown miners (21.8%) and F2Pool (20.5%).

The dominance of the top five known pools reached 65.4% share, compared to 62.1% in September.

Owner Distribution:

Address Type	Aug	Sep	Oct
Hodlers	36.7mn	37.6mn (+2.50%)	38.6mn (+2.66%)
Cruisers	18.2mn	19.0mn (+4.11%)	20.0mn (+5.04%)
Traders	3.43mn	3.85mn (+12.2%)	4.78mn (+24.3%)

The number of addresses holding ETH grew 4.8% to an all-time high of 63.3mn in October. This includes a significant increase in traders (addresses holding the asset for less than 1 month) of 24.3% to 4.78mn. The number of long-term holders increased 2.66% to 38.6mn, an all-time high for the cryptocurrency.

Developer Updates and Statistics:

News Summary

Aurora, a crypto development platform, announced in October that it raised $12mn of funding to contribute in scaling the Ethereum ecosystem. On the other hand, the launch of 'Rocket Pool', a decentralised Ethereum staking protocol, has been delayed at the last minute after a bug was found in the system.

Ripple (XRP)

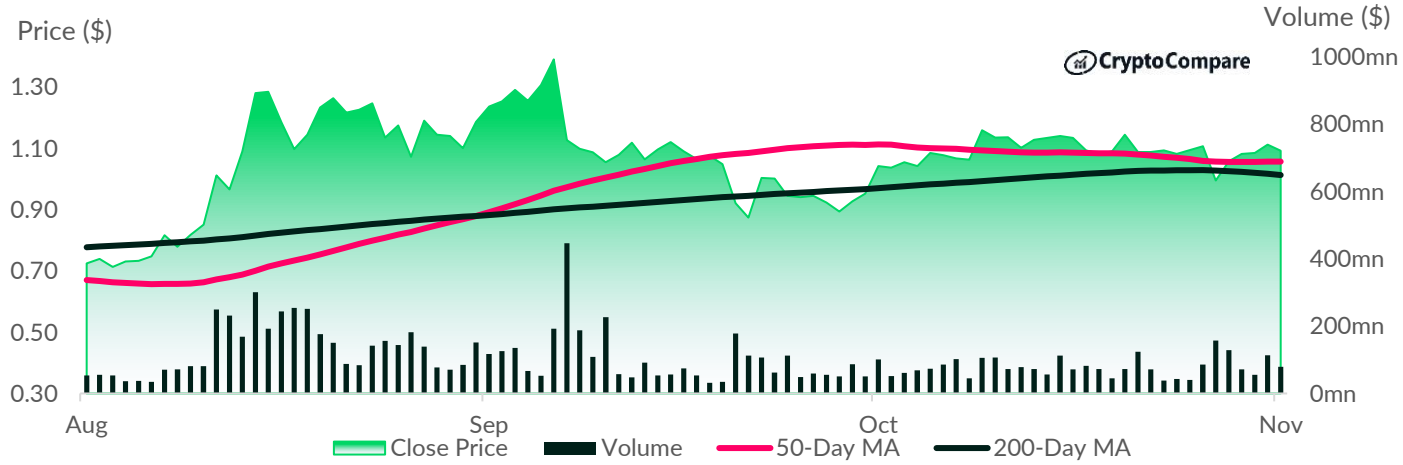

Summary
XRP's price rose 16.8% in October to $1.11, reaching a market capitalization of $106bn at the end of the month. This included an intra-month high of $1.16, which is 64.7% below the cryptocurrencies all-time-high of $3.29, reached on January 1st 2018. Monthly USD volumes grew 30.2% to $3.98bn, while 30-day volatility fell from 117% to 66%. Ledger metrics continued an upwards trend with 43.4mn transactions on the network (up 21.3%), 212k account creations (up 90.4%), and average transaction fees falling to 0.156c (down 20.8%), from September.

Market Activity:

Key News/Events
Oct 22nd – Ripple scores major win: Judge orders SEC to explain... a lot
Oct 22nd – Ripple CEO says the SEC helped Ethereum overtake XRP as No.2 crypto
Oct 11th – Ripple and Nelnet announce $44 million clean energy fund

Market Metrics	Aug	Sep	Oct
Market Cap	$120bn	$103bn	$106bn

Monthly Volatility	133%	117%	66.0%
Monthly Max Drawdown	-48.3%	-39.3%	-23.1%

XRP's price closed at $1.11 in October, ending the month up 16.8% . This is marginally higher than the 50-day and 200-day moving averages, which closed the month at $1.06 and $1.02 respectively. The moving averages trend were temporarily broken on the 27th of October, and thus XRP has an important month ahead from a technical analysis perspective, given that the moving average trends will act as resistance levels. Average daily volumes rose 3.52% in October to $79.5mn.

Volume Statistics:

Solana

Summary

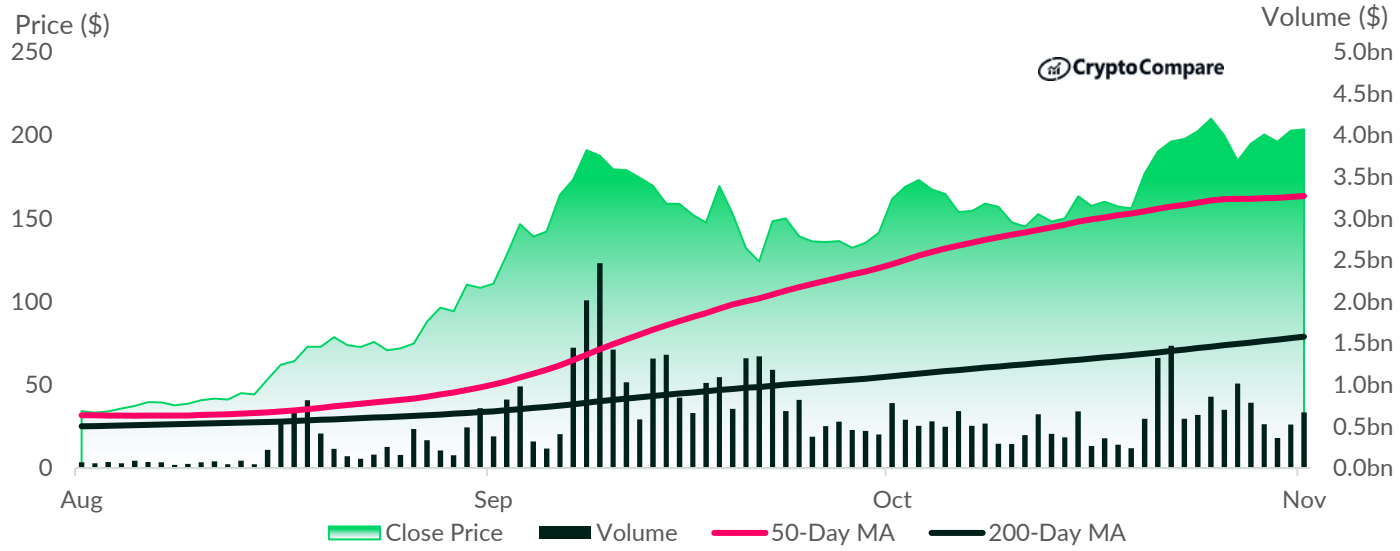

Solana's price increased 43.4% in October to $203, reaching a market capitalization of $102.1bn at the end of the month, which included an all-time high of $210 on the 25th of October. DeFi activity on the Solana blockchain continued to grow, albeit at a slower pace – 35.0% growth from September to $12.5bn, compared to a 177% increase the month prior. October also saw the end of a Solana Ventures-backed hackathon, which had almost 6,000 participants that submitted 568 final projects.

Market Activity:

Key News/Events
Oct 21st – Solana-based DeFi protocol Synchrony raises $4.2m for composable indices
Oct 21st – Solana reaches record high in TVL on DeFi protocols while SOL price soars
Oct 2nd – Grayscale adds SOL to Digital Large Cap Fund portfolio

Cardano (ADA)

Summary

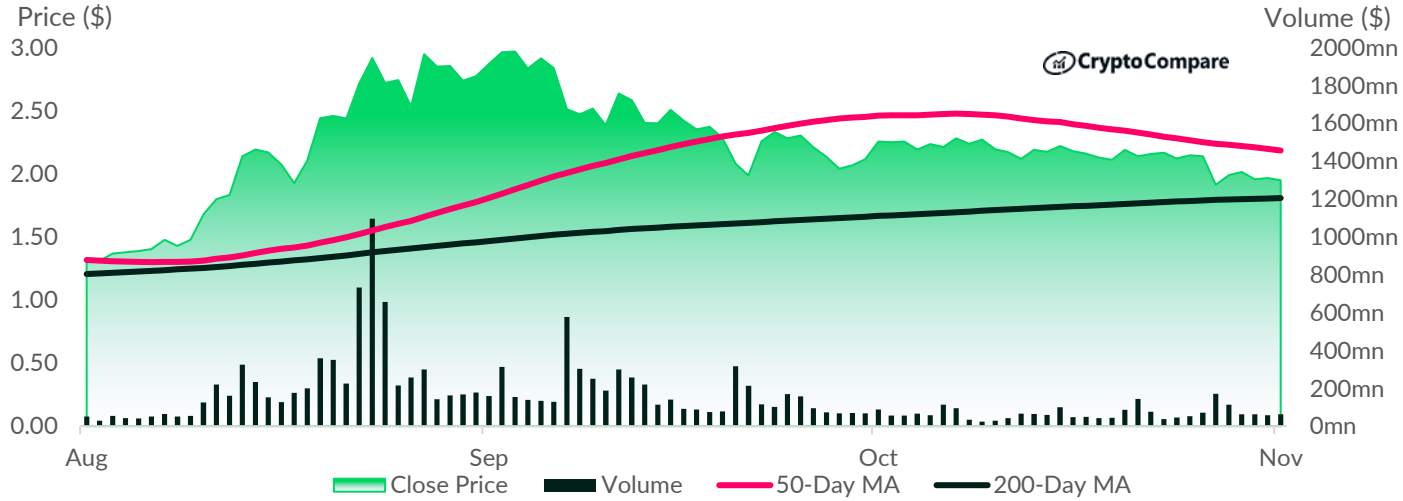

Cardano's price dropped 7.1% in the month of October to $1.97, reaching a market capitalization of $65.4bn at the end of the month. Total monthly volumes (ADA/USD markets) fell 58.9% to $2.11bn, while volatility also fell significantly from 99.5% to 54.4%. As a result, Cardano became the least volatile asset out of the top five in October. There were mixed movements in activity within the Cardano blockchain, as monthly transactions rose 43.2% to 2.63mn, while average daily active addresses fell 52.9% to 56k.

Market Activity:

Key News/Events
Oct 22nd – Cross-chain bridge connecting Cardano and Ethereum set to open
Oct 21st – Cardano set to enter the Babbage Era after Alonzo HFC milestone
Oct 20th – RavenDex unveils proposed DEX for the Cardano Ecosystem, kicks off RAVE token seed sale

The number of addresses holding ADA grew 15.2% to an all-time high of 3.1mn in October. This includes a significant increase in Cruisers (addresses holding the asset between 1 month and 1 year), from 1.8mn in September to 2.3mn in October. Similarly, long-term holders increased 4.0% to 255k, while traders decreased 21.6% to 481k.

Developer Updates and Statistics:

News Summary

In October, the Cadalabs project, a NFT marketplace on the Cardano network, raised $1mn in a private token sale and announced a pre-sale to take place throughout the month. Cardano also developed a cross-chain bridge with NFT solutions provider Bondly, connecting the Cardano and Ethereum networks.

Developer Statistics	Sep	Oct
Github Stargazers	2,100	3,656
Total Commits	5,030	5,159
Total Contributors	91	115
Total Forks	401	613

Investment Products and Corporate Holdings:

ETP Provider	ADA Held	AUM*	Product Type
21Shares	45.0mn	$87.8mn	ETN

*Current ETP AUM values as of 4 Nov 2021
For more information on Digital Asset Products, see CryptoCompare's Digital Asset Management Review

Corporate Holdings

*As of **October 2021**, there are no public firms on record with ADA holdings.*

Glossary

METRIC	Definition/Methodology	Report Section	Factsheets
Block Rewards	The total amount of ETH rewarded to miners.	-	**ETH**
Block Size	Average size of a block in terms of data storage. Standard unit is megabytes (MB).	**Proof of Work Metrics**	**BTC, ETH**
Block Time	Average time taken for the next block to be mined, measured in seconds.	**Proof of Work Metrics**	**BTC, ETH**
Blocks Burnt	The total number of ETH burnt following transactions on the Ethereum blockchain. This was an update caused by the London Fork, which took place on the 5th of August 2021.	-	**ETH**
Cruiser	An investor who has been holding the underlying asset between 1 month and 1 year.	-	**BTC, ETH, SOL**
Difficulty	How difficult it is for miners to mine the next block in the blockchain. As difficulty increases, a higher hashrate is required to have the same probability of mining the next block.	**Proof of Work Metrics**	**BTC, ETH**
Github Stargazers	The number of likes/bookmarks the asset's Github repository has received.	-	**ALL**
Hashrate	The computational power used in mining operations. Standard unit is terahashes per second (TH/s).	**Proof of Work Metrics**	**BTC, ETH**
Hodler	An investor who has been holding the underlying asset for over 1 year.	-	**BTC, ETH, SOL**
Lightning Network Capacity	Measures the total number of Bitcoin that can be transacted via the lightning network at any one point in time.	-	**BTC**
Monthly Volumes	Monthly volumes represents the USD CCCAGG market volumes, as per CryptoCompare's aggregate index methodology.	-	**ALL**
Market Cap	This accounts for all coins in circulation, including those held by team members or the company. This also includes coins in smart contracts or escrow.	**Asset Performance & Market Metrics**	**ALL**
Max Drawdown	Percentage difference between the monthly high and monthly low price for a given asset.	**Asset Performance & Market Metrics**	**ALL**
No. of Nodes	The number of computers that are currently running on the Bitcoin network and storing the entire historical blockchain.	-	**BTC**
No. of Open Channels	The number of open passages between Bitcoin nodes that allows for transactions to take place within that channel.	-	**BTC**
NVT Ratio	Ratio of an asset's market capitalization to the daily transaction volume of that asset, where daily transaction volume is equal to daily transaction count* daily average transaction value*close price.	**Asset Performance & Market Metrics**	**ALL**
Sharpe Ratio	30-day returns in excess of the risk-free rate per unit of volatility. Risk-free rate is assumed to be 0.	**Asset Performance & Market Metrics**	**ALL**
Staking Rate	The annualized return for an individual who stakes (participates in transaction validation) his/her tokens. It is a feature of Proof of Stake (PoS) cryptocurrencies.	**Proof of Stake Metrics**	**ETH, SOL, ADA**
Total Commits	The number of individual changes made to the underlying code.	-	**ALL**
Total Contributors	The number of individuals who have contributed to a project, but do not have collaborator access.	-	**ALL**
Total Forks	The number of copies made of the original code. It allows Github users to make changes to a project without affecting the original repository.	-	**ALL**
Total Value Locked	The total monetary value of assets deposited in a decentralised finance blockchain or protocol.	**DeFi and On-Chain Activity**	**ETH, SOL**
Trader	An investor who has been holding the underlying asset for under 1 month.	-	**BTC, ETH, SOL**
Volatility	Annualized, rolling 30-day standard deviation of log returns.	**Asset Performance & Market Metrics**	**ALL**
